#### **DRY CREEK TRANSFER STATION**

518 West 3450 North Spanish Fork, Utah 84660 801-489-3027 · suvswd.org

HEY THERE, KID! Have you ever wondered ...

Let's find out what happens to our trash and how everyone — from waste workers to families like yourscan help keep Utah safe and clean.

# WHERE DOES MY TRASH GO?

GARBAGE and RECYCLING are collected from the bins at your home by a contracted waste hauler.

draw your

trash in here

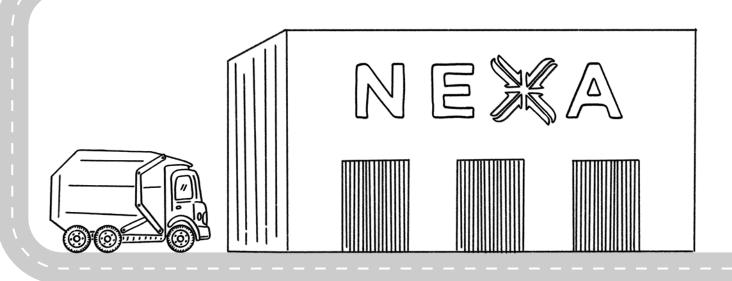

GARBAGE and RECYCLING trucks transport waste to the Dry Creek Transfer Station.

# TRANSFER STATION

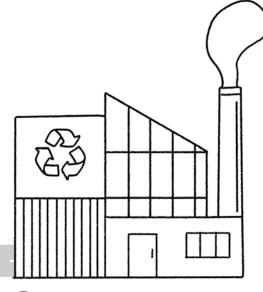

At the Transfer Station, GARBAGE and RECYCLABLES are pushed into their own compactors that form the waste or recyclables into a bale. The compacted bales are loaded into hauling trucks.

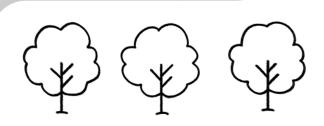

At the Bayview Landfill, the GARBAGE is unloaded, compacted, and buried.

6 RECYCLING CENTER

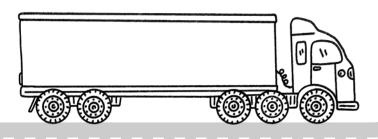

At the MRF, RECYCLABLES are sorted and then sold to manufacturers to be broken down and made into new products that can be sold and purchased in our community.

HAULING TRUCKS

Hauling trucks are filled with the compacted waste bales. GARBAGE is taken 33 miles away to the Bayview Landfill. RECYCLABLES are hauled to a Material Recovery Facility (MRF).

(rhymes with "turf") →

Whether you have something to throw away or questions about where your waste is going, Nexa can help you get rid of your trash and trust that you are doing it in a way that keeps Utah beautiful and clean.

We are the next-generation waste solution, here to serve our community!

# WHERE DO I PUT IT?

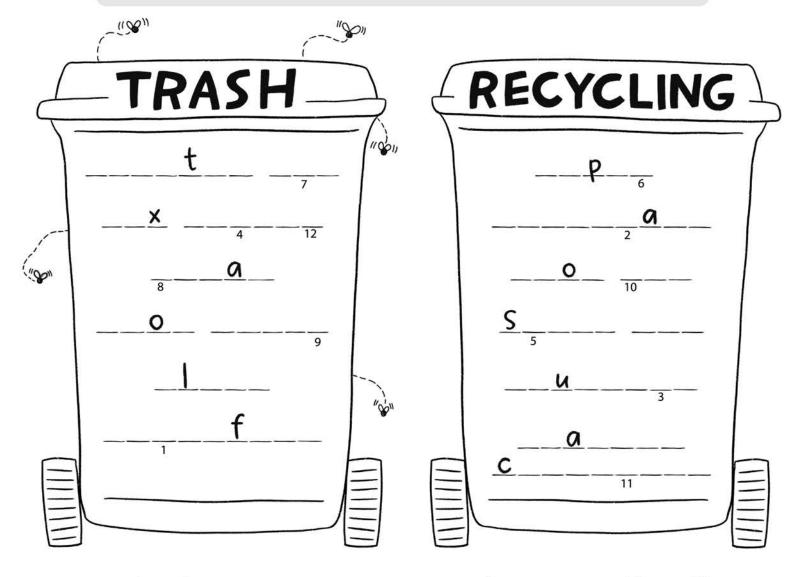

Sorting waste into the right bins is one of the easiest ways to make sure Utah's trash and recycling are handled the right way. Your efforts at home really make a difference in our community! Here are some common examples of what goes in which bin:

These items need to be sorted into the right bin. Fill in the blanks with the correct items, then use the numbers to solve the riddle below!

straw cardboard plastic container food box paper styrofoam plastic bag steel can aluminum wax carton glass food pouch

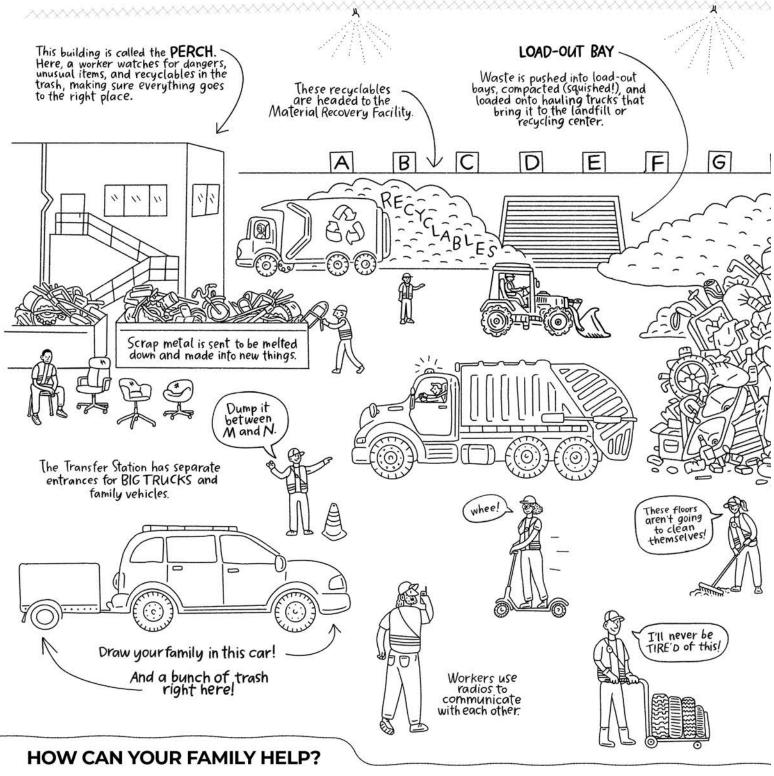

What has two wheels and flies?

When people put things in the recycling bin that don't belong, it can cause problems. **Not everything can be recycled!**Let's keep recycling easy by only adding items that are accepted.

# TRANSFER STATION

It's a busy day at the Transfer Station! This is where trash and recyclables from homes and businesses are gathered, sorted, and sent to the right destinations—whether that's the landfill, the recycling center, or another facility. The workers do their best to send reusable items to the right place, but it's up to all of us to make choices that help keep reusable materials out of the landfill.

Sort your recyclables so they can be turned into new things instead of going to the landfill.

Look in the landfill pile. Can you find...

□7 cardboard boxes □5 cans □3 milk jugs

Donate or sell items that still work instead of throwing them away.

Can you find...

a scooter's last ride to the scrap metal pile

old chairs that are being enjoyed by a worker

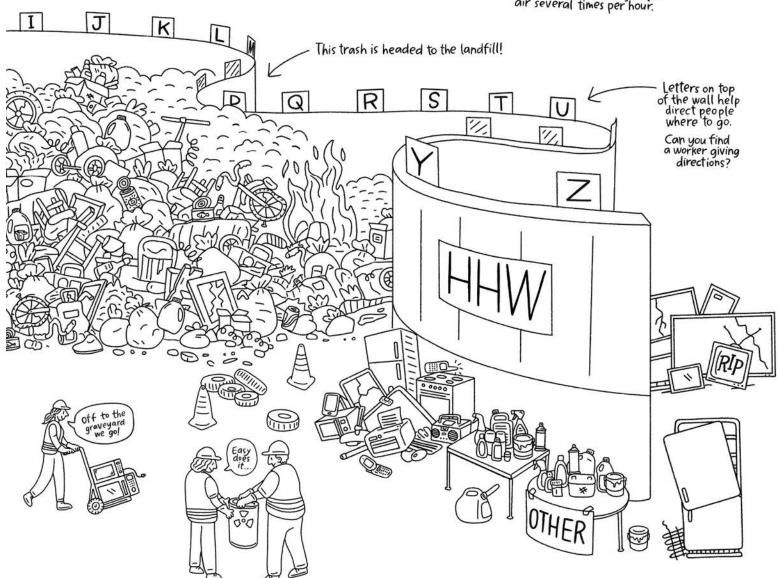

Water canons are ready to put out fires!
Can you find a fire in the trash?
Quick! Draw a stream of water to put it out!

Protective nets help keep birds safely outside. The Transfer Station handles
600 TO 1,000
tons of trash every day!

Whatcha doin', mister?

Misters spray water and odor neutralizer, and the ventilator system changes the air several times per hour.

Orop off broken electronics or appliances so they can be taken apart safely.

Can you find...

□aTV graveyard □3 old cell phones

Bring in hazardous waste (like paint, fuels, or batteries) so it can be handled safely.

Can you find...

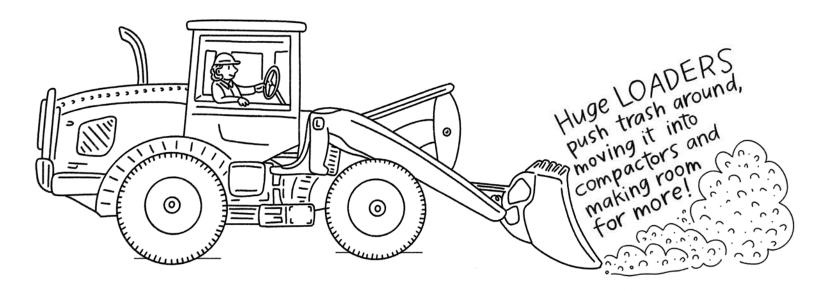

2 old aerosol (spray) cans

3 old paint cans

GARBAGE & RECYCLING VEHICLES

The Transfer Station handles lots of traffic—sometimes 600 to 800 cars and trucks a day! From garbage and recycling trucks to family cars and business vehicles, each one helps keep our community clean and organized.

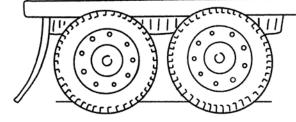

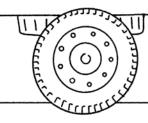

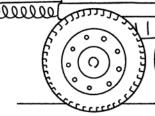

Trash is loaded onto HAULING TRUCKS.

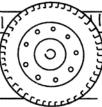

≥State-of-the-art € COMPACTORS squish it as small as possible! Better
SQUISHING
means fewer
trucks traveling
on our roads!

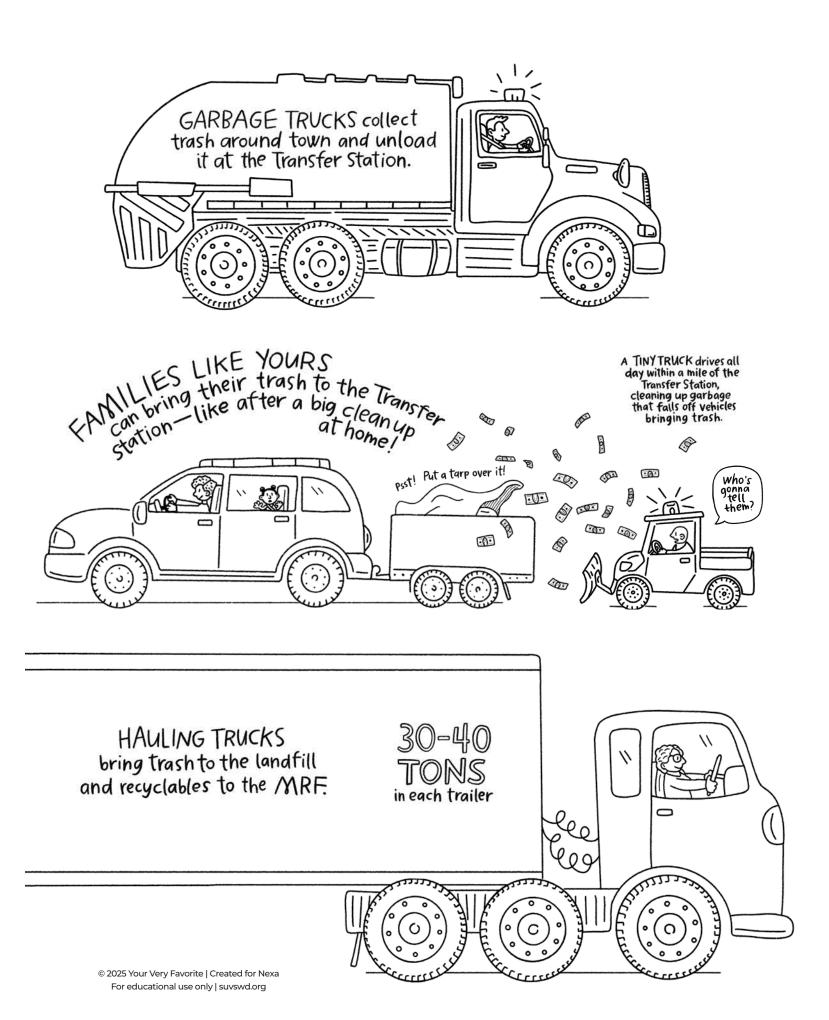

(That saves MONEY and means LESS TRAFFIC and LESS AIR POLLUTION too!)

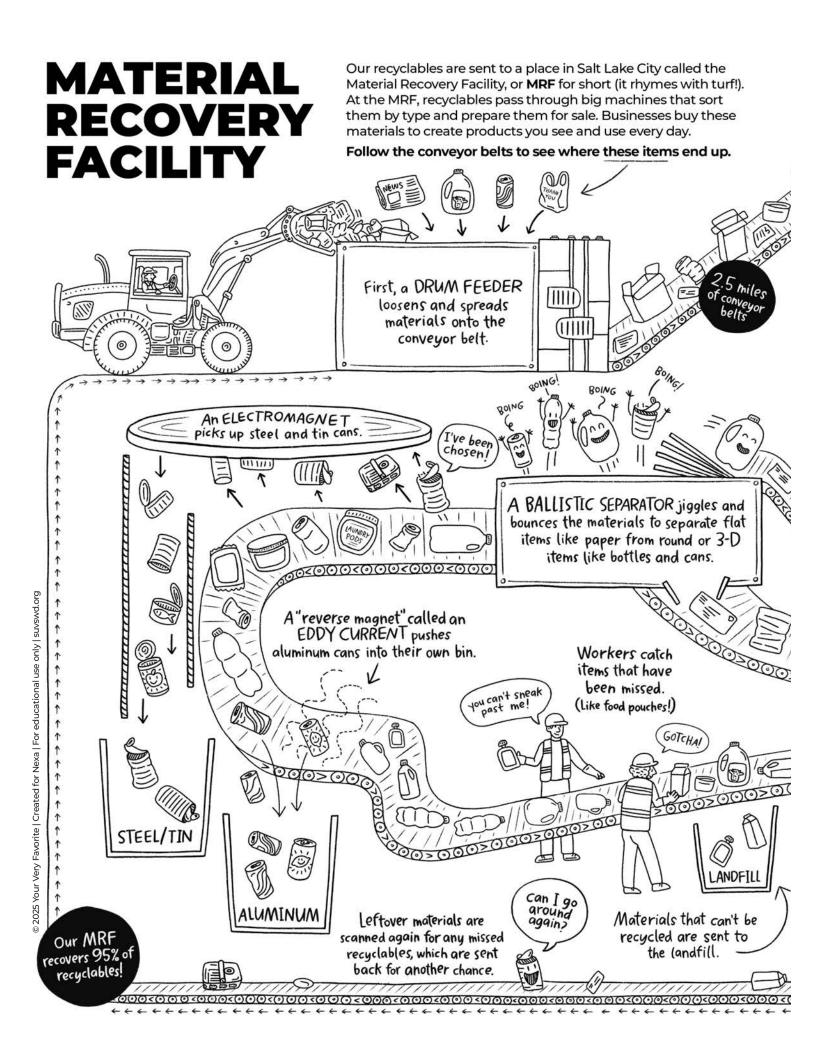

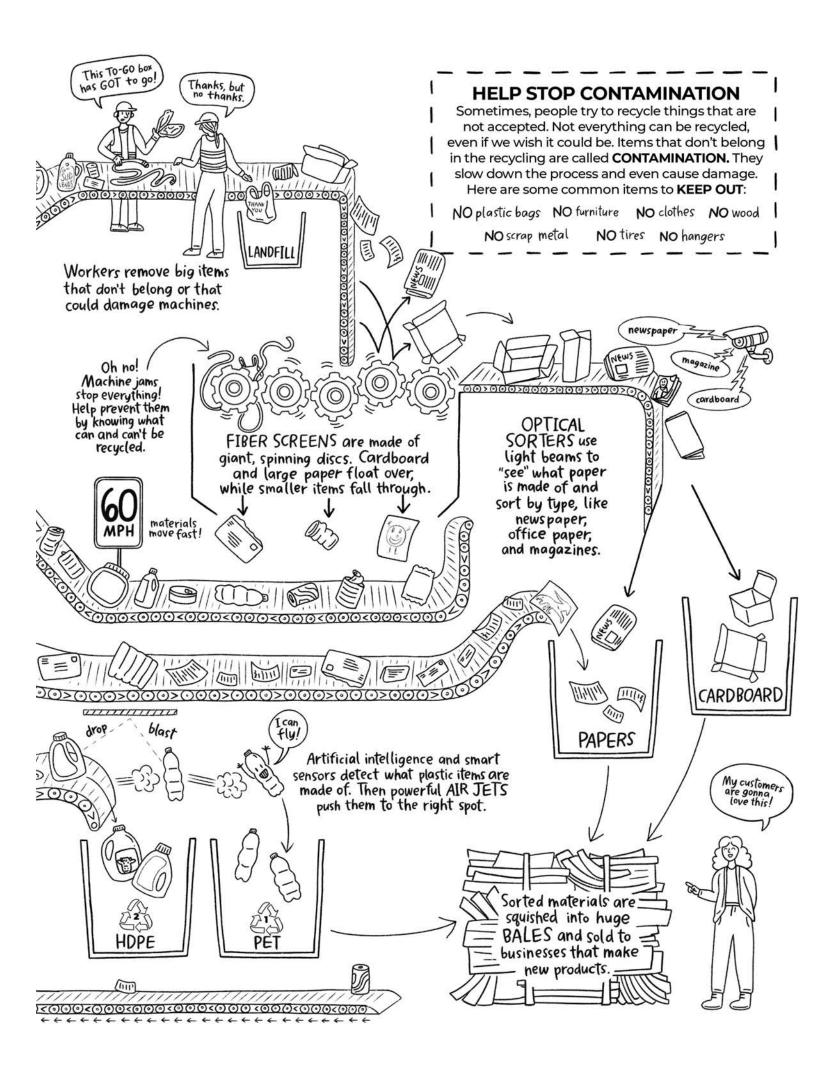

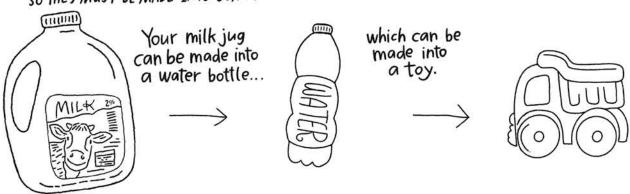

Your choice to recycle keeps materials out of the landfill and gives them a second life. Businesses use the items you recycle to make new products. This helps the planet by saving energy, reducing waste, and using fewer of the Earth's resources.

SOME THINGS CAN BE RECYCLED AGAIN AND AGAIN!

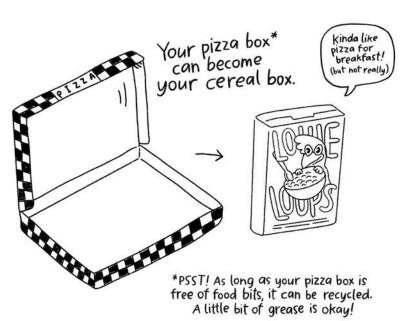

SOME THINGS, LIKE PLASTICS, CHANGE WHEN THEY ARE RECYCLED, SO THEY MUST BE MADE INTO SOMETHING DIFFERENT.

PAPER AND CARDBOARD PRODUCTS ARE RECYCLED INTO PAPER PRODUCTS WITH SHORTER FIBERS.

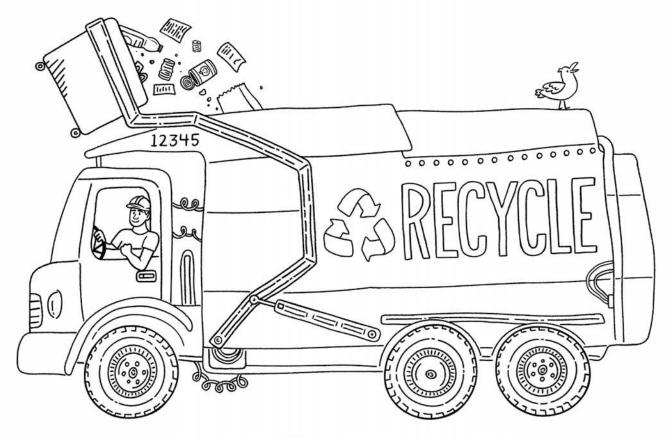

# Can you guess what new product can be made out of each of these recyclable materials? Follow the lines to find out!

7777000000 Sometimes, the first step toward real change is a change in attitude... RECYCLING isn't worth the effort. You can't convince me that SMALL CHANGES can have a big impact. ≥I JUST DON'T BELIEVE THAT. < A PERSON LIKE ME CAN'T MAKE A DIFFERENCE. Some people say IT'S NOT HARD to recycle! Just toss it all into one recycling bin. Keep it loose—don't put it in a bag. Empty cans, milkjugs, cardboard boxes! My math test that I got an Fon, Even my pizza box if it doesn't have food stuck on it. Cereal boxes. Soda bottles. Think of all the things! it sounds like too much hassle. I don't think all that waste can be turned into something useful. Experts tell us that Utah County recycles more than 10,000 TONS every year. You know what I heard? I heard that ACTUALLY, all our recyclables just end up in the landfill. I find it hard to believe that RECYCLING will make a REAL DIFFERENCE! WAIT! We can turn this around! Read each line from the bottom to the top and see how changing attitudes can change EVERYTHING! 3000000

# SPOT 15 DIFFERENCES

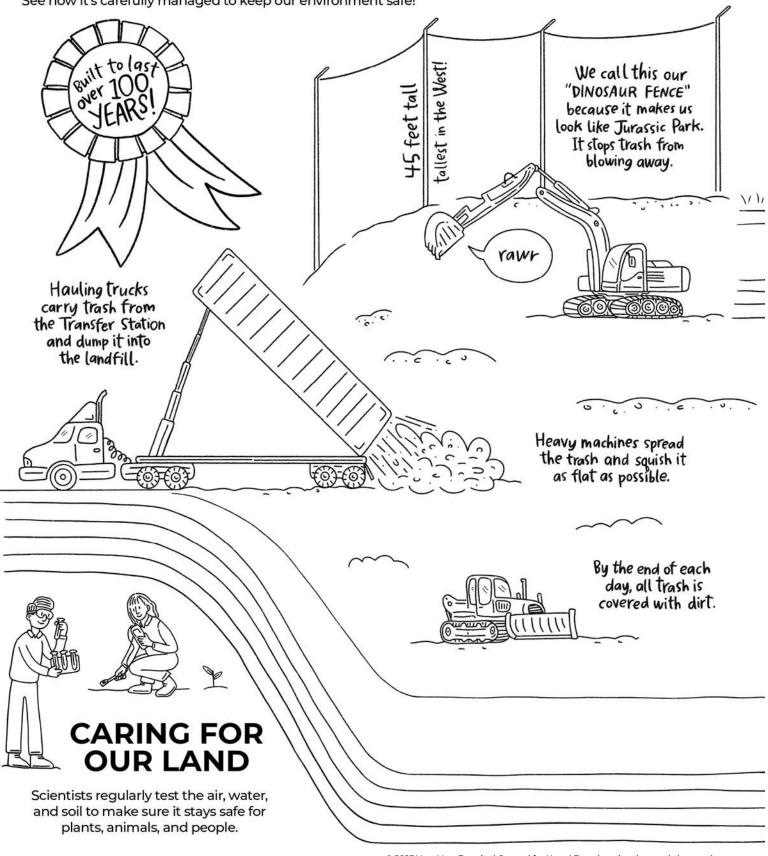

Single-stream recycling means you put all your recyclables—like paper, cardboard, plastic, and cans—into one bin. They get sorted at the recycling center (MRF) later, making it easier for you!

#### WHAT HAPPENS AT THE

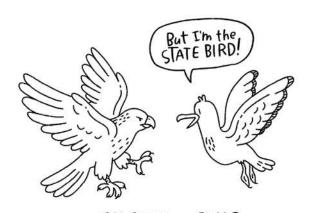

# **BAYVIEW LANDFILL?**

Our trash that can't be recycled goes to the Bayview Landfill, west of Utah Lake. See how it's carefully managed to keep our environment safe!

# **NOT A "DUMP"**

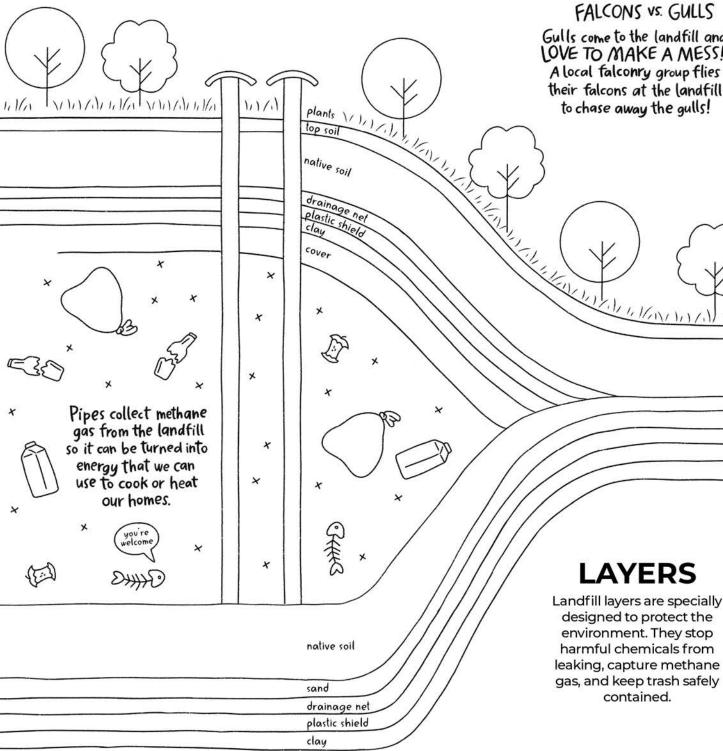

A dump is an open pile of trash that harms the environment. The Bayview Landfill is different-trash is carefully buried, covered, and monitored to prevent pollution. Over time, grass and plants can grow, and the land can be put to new use, like as a park or a solar energy field.

Gulls come to the landfill and LOVE TO MAKE A MESS! A local falconry group flies their falcons at the landfill to chase away the gulls!

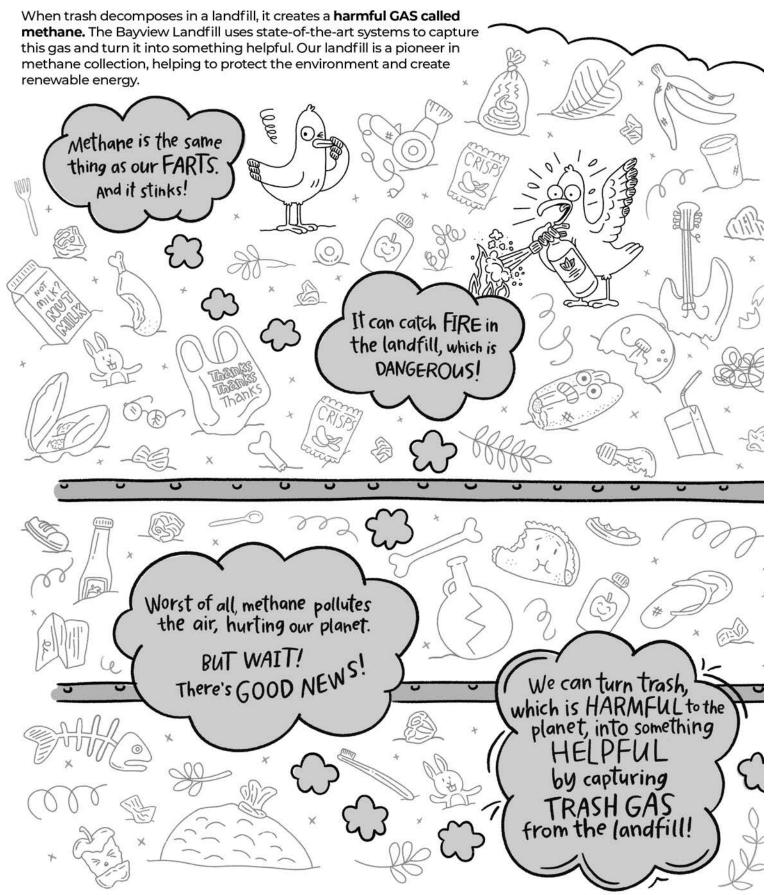

# **LAYERS**

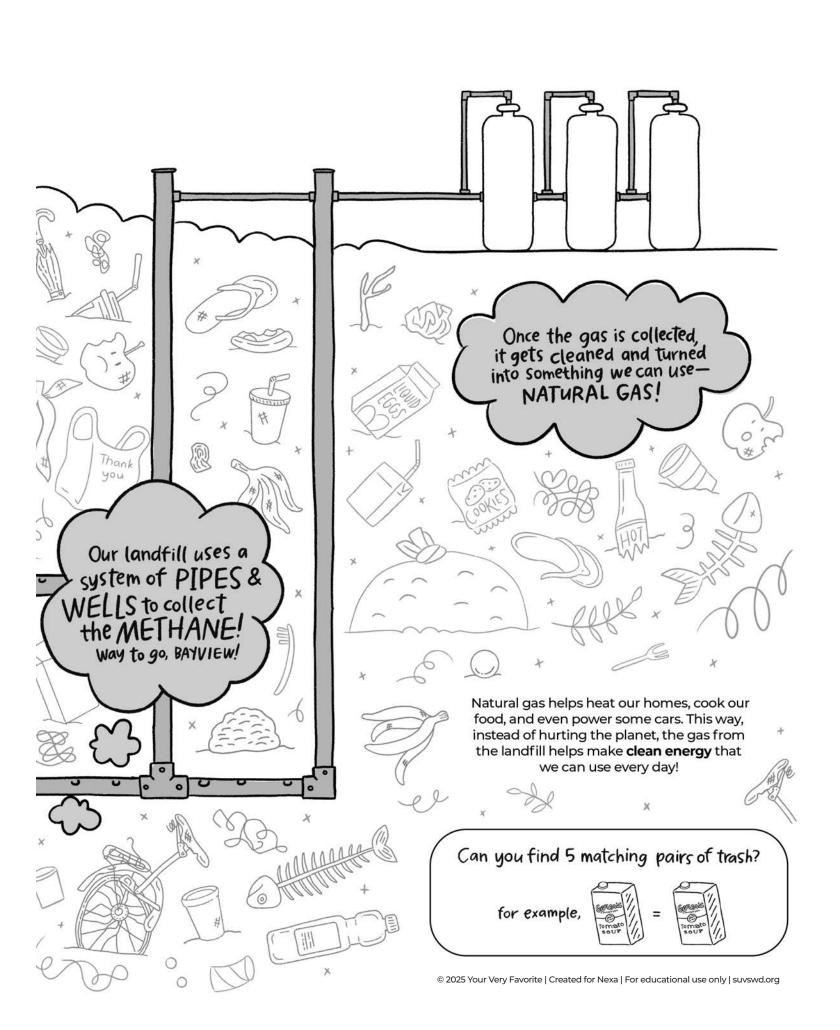

designed to protect the environment. They stop harmful chemicals from leaking, capture methane gas, and keep trash safely contained.

rock and gravel

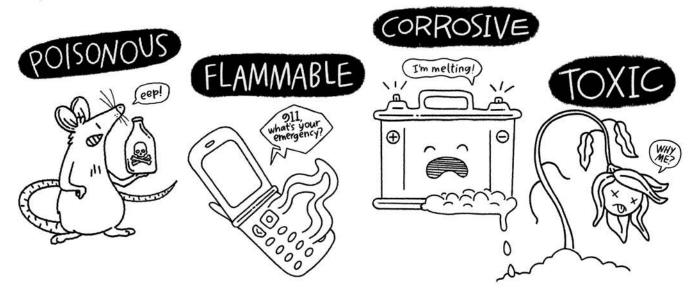

# TURNING HARMFUL GAS INTO HELPFUL ENERGY

# HOUSEHOLD **HAZARDOUS WASTE**

Household hazardous waste (HHW) is anything in or around your home that is:

It is **DANGEROUS** to dispose of these items in your garbage can or down sewers.

It is ILLEGAL to abandon them or pour them in gutters, storm drains, or waterways.

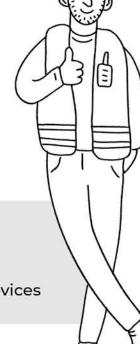

batteries electronics cooking oil

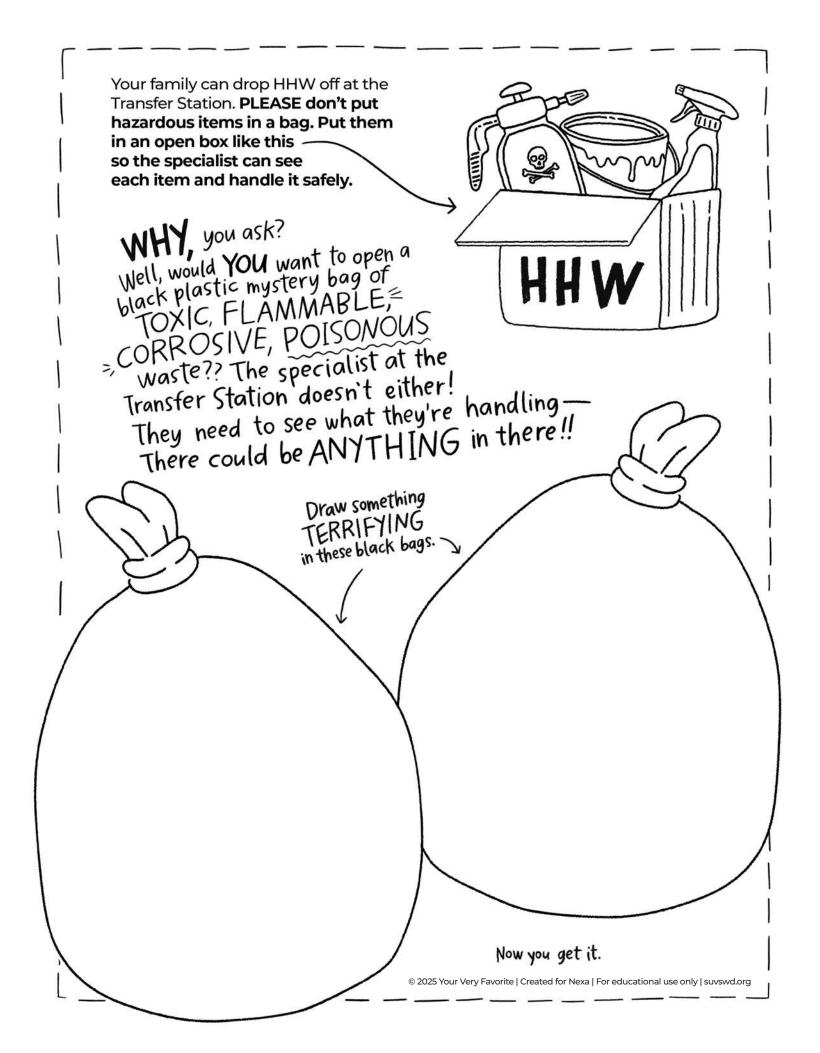

fuels aerosols pesticides paint

cleaning supplies automotive fluids fluorescent light bulbs mercury-containing devices

knows how to handle these items safely so they don't hurt people, animals, or the earth.

RECHARGEABLE BATTERIES can't go out with your regular trash. When they are crushed in the garbage truck or at the Transfer Station, they can overheat and start a fire! This actually happens ALL THE TIME because people don't know any better. But now YOU KNOW, so you're never going to do it, right? RIGHT?

How much does it cost to drop off used batteries at the Transfer Station?

NOTHING! We take them FREE OF CHARGE get it??

Dropping off used batteries at the Transfer Station helps keep everyone safe! We'll make sure they are safely recycled to make new products and to protect the environment.

# from TRASH to TREASURE: a RECYCLING JOURNEY

ENGINEER Designs better, safer, cleaner ways to handle trash

RESEARCHER Finds new ways to reuse trash

# REDUCE, REUSE, RECYCLE

Creating less waste is a simple way we can all pitch in to make our community a better place. When we reduce, reuse, and recycle, we help keep Utah a place we can be proud of, now and in the future.

**REDUCE** means using fewer things so we don't create as much waste.

**REUSE** means finding ways to use something again.

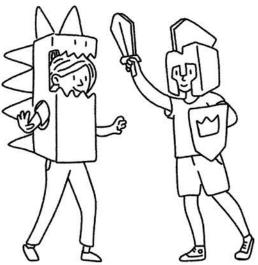

**RECYCLE** means turning old materials into something new instead of trash.

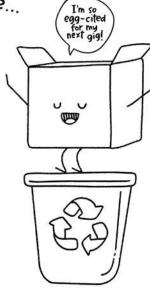

REDUCE

Buy from a local business instead of ordering online. That's one less box used for shipping!

REUSE

Make Halloween costumes from cardboard boxes.

RECYCLE

Put cardboard in the recycling bin. It might become an egg carton!

# Now let's try it with a plastic grocery bag ...

REDUCE

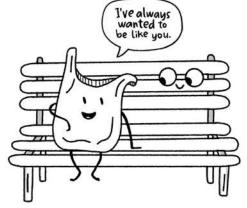

Bring your own reusable bags to the store.

#### REUSE

Use grocery bags to pick up pet poop.

#### RECYCLE

Curbside recycling can't accept grocery bags, but many grocery stores do! Bring in used bags to be recycled into park benches! Every day, we make choices about what to TOSS, RECYCLE, or REUSE. SMART choices help keep Utah CLEAN and PROTECT the environment!

Find your way through the maze by making GOOD WASTE DECISIONS. Follow the DOs to keep moving forward—but watch out! The DON'Ts lead to dead ends.

**DO** reuse empty jars to store odds and ends (and goodies!).

DON'T put HHW in a black trash bag.

DO use a lunchbox instead of plastic bags.

**DON'T** send cardboard to the landfill! It deserves a second chance!

**DO** bring a reusable water bottle with you.

**DO** give mismatched socks a second life as sock puppets!

DO turn ruined clothing into cleaning rags.

I dig it

DON'T put styrofoam containers in the recycling bin.

**DON'T** throw your old electronics out with the trash!

**DO** donate toys you no longer use.

belong here.

**DON'T** bag your recyclables. Leave them loose!

# Thanks for doing your part!

Lots of people making simple, easy choices quickly adds up to make a HUGE difference!

# SMALL ACTIONS, BIG DIFFERENCE

Every small action helps make a BIG difference for our community and future generations! **Circle two things you'd like to do.** 

Set up a recycling bin at home to make sorting easy.

Carry a reusable water bottle instead of buying disposable.

Remind my family to bring trash with rechargeable batteries to the Transfer Station.

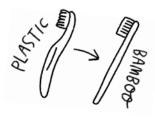

Talk to my family about household hazardous waste.

Display a poster showing what to put in the recycling bin.

Bring my own shopping bag.

Swap a product for something more renewable.

Check the recycling number on plastic items that my family uses.

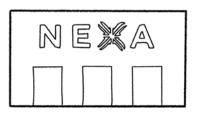

Find a new use for an old jar.

Choose a reusable lunch bag.

Donate or sell toys and clothing I've outgrown.

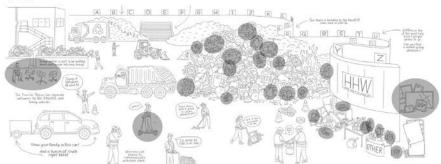

Bring my family to the Transfer Station education room.

# DU'RE INVITED BRING THE FAMILY TO OUR STATE-OF-THE-ART DRY CREEK TRANSFER STATION!

518 West 3450 North Spanish Fork, Exit 260 Open from 7 am to 6 pm Monday to Saturday

Watch trucks come and go and check out our hands-on exhibits in the education room.

# HEY THERE, GROWN-UPS!

This book is packed with info that EVERYONE should know. Take a moment to flip through it with your kids—they'll love sharing what they've learned with you!

SINCE WE KNOW YOU'RE BUSY, HERE ARE SOME QUICK ANSWERS TO QUESTIONS WE HEAR MOST OFTEN IN OUR COMMUNITY:

### RECYCLING

#### What goes in the recycling bin?

Cardboard, paper, food boxes, aluminum cans, steel (tin) cans, and plastic containers labeled and (2). Make sure they are clean and dry.

#### What items do NOT go in the recycling bin?

Avoid recycling anything not on the list. Some common items you shouldn't recycle include plastic bags, foam containers, food waste, and wax-coated cartons (like juice or milk cartons).

# Do I need to rinse containers before recycling?

Yes, rinse food and drink containers to keep recycling clean. Leftover food and liquid make the materials harder to process and may contaminate the entire load, causing the whole batch to be sent to the landfill.

#### Why can't I bag my recyclables?

Plastic bags and bagged recyclables jam sorting machines. Always place recyclables loose in the bin so they can be sorted properly.

#### Where can I recycle glass?

Utah County does not offer curbside glass recycling, but you can bring your glass to the Transfer Station for recycling.

# Why should I recycle? Does it really make a difference?

Recycling saves resources, reduces landfill waste, and protects the environment. Each year, more Utahns are choosing to recycle, keeping valuable materials out of landfills and contributing to a cleaner future. Thank you for recycling! Every person makes a difference!

#### LANDFILL

#### What happens to our trash at the landfill?

Our state-of-the-art landfill is designed to last over 100 years, even with our growing population! Trash is carefully buried in layers that include protective barriers to prevent soil and water contamination. This ensures long-term environmental stewardship for future generations.

#### How does our trash turn into energy?

As trash decomposes, methane gas is produced. Instead of releasing this harmful gas into the air, the landfill collects it and converts it into clean natural gas. This process reduces emissions and turns waste into a valuable renewable energy resource.

## **HAZARDOUS WASTE**

# What should I do with items containing hazardous materials?

Items like motor oil, paint, and cleaners shouldn't go in the trash or recycling. You can drop them off at the Transfer Station.

# What do I do with batteries and old electronics?

Rechargeable batteries (like lithium batteries) and old electronics should never go in the trash or recycling bin. They often cause dangerous fires and they contain harmful substances that could pollute the environment. Instead, bring them to the Transfer Station for disposal. We'll handle them safely, recover valuable materials, and ensure they're reused or recycled responsibly to reduce waste and conserve resources.

Come visit the Dry Creek Transfer Station to explore the Education Room, learn more about waste management, or drop off your trash!
